C119598	STENT THROMBOSIS ARC GRADE DEFINITE		Includes acute ischemic symptoms at rest, acute post ischemic ECG, positive biomarkers and pathological evidence. Definite stent thrombosis is considered to have occurred when there is either angiographic or pathological confirmation. Angiographic confirmation is the presence of a thrombus at coronary angiography that originates in the stent or in the segment 5 mm proximal or distal to the stent, with the presence of at least 1 of 3 clinical criteria within a 48-hour time window: 1) acute onset of ischemic symptoms at rest; 2) new ischemic ECG changes that suggest acute ischemia; or 3) typical rise and fall in cardiac biomarkers. Pathological confirmation is evidence of recent thrombus within the stent determined at autopsy or via examination of tissue retrieved following thrombectomy. (Cutlip DE, Windecker S, Mehran R, et al. Clinical End Points in Coronary Stent Trials : A Case for Standardized Definitions. Circulation. 2007;115:2344-2351)	ARC Definite Stent Thrombosis
C119600	STENT THROMBOSIS ARC GRADE POSSIBLE		Possible stent thrombosis is considered to have occurred with any unexplained death more than 30 days after intracoronary stenting. C119599	STENT THROMBOSIS ARC GRADE PROBABLE		Includes death within 30 days and myocardial infarction of stent territory. Probable stent thrombosis is considered to have occurred after intracoronary stenting in the following situations: 1) any unexplained death within the first 30 days; or 2) irrespective of the time after the index procedure, any MI that is related to documented acute ischemia in the territory of the implanted stent without angiographic confirmation of stent thrombosis and in the absence of any other obvious cause. C184711	TANGENT METHOD	Slope Method	A method to determine the end of the T wave. A tangent is drawn to the steepest descending slope of the T wave between its summit and the notch; the end of the T-wave is defined as the point of intersection of this tangent with the base line. (Lepeschkin E, Surawicz B. The measurement of the Q-T interval of the electrocardiogram. Circulation 1952; 6: 378-88).	Tangent Method
C184712	THRESHOLD METHOD		A method to determine the end of the T wave. A line parallel to the isoelectric line at a fraction (e.g. 5%) of the maximum T wave amplitue is constructed. The intercept of the descending limb of the T wave with this line is then defined as the end of the T wave.	Threshold Method
